  Home Component
    √ renders welcome message and login button when not authenticated (71 ms)
    √ renders welcome message for authenticated users (15 ms)

Test Suites: 1 passed, 1 total
```

```
PASS  src/Login.test.js (5.01 s)
  √ renders login page (77 ms)
  √ displays error message for unsuccessful login (131 ms)
  √ allows successful login (30 ms)

One of your dependencies, babel-preset-react-app, is importing the
"@babel/plugin-proposal-private-property-in-object" package without
declaring it in its dependencies. This is currently working because
"@babel/plugin-proposal-private-property-in-object" is already in your
node_modules folder for unrelated reasons, but it may break at any time.

babel-preset-react-app is part of the create-react-app project, which
is not maintianed anymore. It is thus unlikely that this bug will
ever be fixed. Add "@babel/plugin-proposal-private-property-in-object" to
your devDependencies to work around this error. This will make this message
go away.

Test Suites: 1 passed, 1 total
